Johannesburg, South Africa

SYNOPSIS OF THE CANDIDATE:

Having almost 10 years of experience as a senior manager in the Information Technology Management and Knowledge Management, I am a dynamic, resilient, highly self-motivated, and driven person, who possesses sound problem-solving capacity through innovative, conceptual, and creative thinking. Obtaining several international certifications helped me develop adequate research and data-analytical skills which I apply frequently in my career decisions. The research equipped me with substantial data quality management, business analytics, and data science application in the field IT field. I have managed successfully quite several IT projects which entailed considerable problem solving, change management, people management, client orientation (customer-focused), risk management, financial budgets, and diversity management by applying the PMBOK (Project Management Body of Knowledge) based critical concepts and project lifecycle using the technologies and frameworks listed at the end of each career below. Multitasking several projects and handling multiple complex tasks, I often carryout change management (agile approach etc.), people management, diversity management and risk management specifically towards strong and quality service delivery to meet customer needs (client/result oriented). I develop as well manage IT policies and information systems based on my deep understanding of ICT policies, processes and procedures applying IT Systems and governance frameworks listed at the end of each stated career opportunity below. Possessing excellent communication skills (both verbal and written) enables me having excellent networking, negotiation, report writing, presentation and interpersonal skills. From my experience as an IT senior manager; good time management, attention to detail, hardworking, and good team player with minimum supervision skills; has strongly made me realise substantial growth in my career to date. As a leader, I believe strategic approach in finding solutions and empowering of subordinates and co-workers academically, mentally, and socially creates a sound working environment and success in achieving career tasks and milestones. Not only am I able to make independent and impartial advice into informative decision-making, but also have strong assertive personality, being proactive and liaising with internal and external stakeholders when taking initiatives. I am flexible, with ability to work and interact within an ever-changing system, and always willing to go extra-miles (long hours) even under pressure to meet tight deadlines ensuring excellent outcomes. It is important to note that I am a member of the Institute of Information Technology Professionals South Africa (IITPSA).

CERTIFICATIONS:

- Microsoft Certified: Azure Development Associate (AZ204)
- Microsoft Security, Compliance, and Identity Fundamentals (SC200)
- Microsoft Certified: Azure Fundamentals (MCAF) (AZ900)
- Huawei Cloud Security (HCIA H13-811 ENU V12.35)
- CompTIA Security+ Certification (SYO-501)
- Microsoft Certified: Solutions Associate (MCSA) (70-486)
- Microsoft Certified: Professional (MCP) (70-483)
- Microsoft Certified: Technology Associate (MTA) (98-361)
- SAP MM Certified (SAP Certified Application Associate – Procurement with SAP ERP 6.0 EHP)

QUALIFICATIONS:

1. 2009 - 2009. University of Fort Hare: B.Sc. Honours in Computer Sciences
2. 2006 - 2008. University of Fort Hare: B.Sc. (Computer Science & GIS)
3. 2003 - 2004. Shurugwi No.2 Secondary: A-Level (Mathematics, Accounting & Geography)

COMPANY POSITION AND RELEVANT EXPERIENCE:

1. DYNAMIC-DNA (Randburg)

Period: April 2021 to date (4 years 9 months)
Position: Unit Senior Manager (IT Security)
Reporting To: ICT Director
Responsibilities and duties:

- Leading the Cyber-Security Department Unit activities, making decision and directing the Unit including sourcing of the mentors from different companies which practising IT Auditing, IT forensics, Network Security and Cyber-Security.
- Develop, implement, and manage ICT strategies in alignment with our organization and customers' business objectives conforming to the information technology strategies applied.
- Liaise with different stakeholders of different levels and assisting with the awareness and education programs to ensure that all affected staff, contractors, and business partners understand their roles and obligations in respect to data protection at an organisation.
- Responsible for overseeing the provision of expert advice, awareness and training on information security systems as well as manage organizational reengineering and manage the resources effectively.
- Develop, implement, and manage the Department/Unit ICT 5-year strategy in alignment with the department business objectives and broader government IT strategies.
- Maintaining an inventory of critical business systems, the ICT elements (applications, databases, operating systems, and infrastructure) that make up the systems and identify the business owners and IT custodians who are tasked with the effective operation of the system Maintain an up-to-date view and understanding of the network configuration, its core elements and segments and associated security elements.
- Complying with the formal risk acceptance and mitigation process Ensure that security problems, incidents and exposures, vulnerabilities and audit findings assigned to you are resolved promptly in accordance with the commitments made by the affected parties Record and report on progress and escalate areas of concern or unmitigated exposures.
- Maintaining awareness of impact on cost and ability to deliver on Business Unit goals and activities aligned to strategy, managing vendors, IT assets, IT procurements, and Service Level agreements and Operational Level agreements.
- Develop, implement, and manage ICT strategies in alignment with the clients' business objectives and broader government information technology strategies.
- Identifying the scope opportunities for improvement/innovation & ability to deliver client or company specific projects in line with company standards and in agreement with line manager.
- Develop and manage the effective implementation of ICT policies, processes, and procedures.
- Ensuring effective configuration, use and management of IT Security safeguards and tools Provide monthly reports/input to IT Security Manager as evidence for the IT Security Dashboard
- Manage all IT Service Level Agreement and Business Agreements between my organization and suppliers and ensure compliance to all agreements.
- Demonstrating courteous behaviour in dealings with staff and members within the team Create a welcoming environment for staff when they interact with the IT Security department.
- Clarifying and demonstrate understanding of internal and external customer needs and expectations and deliver accordingly.
- Develop and manage the effective implementation of ITC policies, processes, and procedures; Manage all IT Service Level Agreement and Business Agreements between our organization and suppliers to ensure compliance to all agreements.
- Oversee and manage ICT research and advisory services in support of our core business requirements as well as develop, manage, and implement reliable, efficient, and cost-effective IT systems, architecture, infrastructure, and IT operational support services to meet the clients' requirements and to support the IT system clients' entities and institutions.
- Complying with policies and procedures always and ability to be mindful and report on issues that could pose a risk to the company or within IT Security itself.
- Arranging presentations, planning the activities and special industry visitations in the Business Unit and Project Coordinating on all the IT projects undertaken in the Unit and preparation of practicals on all the skills trained in the Business Unit

- Project Coordinating on all the IT projects undertaken by trainees/interns and making needed resources available and sourcing out the projects to be undertaken in the Unit by the teams from stockholders in the industry.
- Provide IT and records management services, managing the alignment the clients' information security to legislation, government standards and security frameworks, as well managing and ensuring the compliance of all systems to government IT policies such as MISS and MIOS i.e., providing IT governance functions in accordance with international governance frameworks ITIL and COBIT applying PMBOK and SDLC foundations.
- Training about 30 interns every season towards Security+ certifications and industrial aspects of IT Security processes, procedures, and risks through tabletop training and participating on:
    - Security metrics to implement vulnerability mitigation by analysing the PICERL (Preparation, Identification, Containing, Eradication, Recovery & Lesson Leaned) approach.
    - Addressing risks/gaps/violations and implementing improved protocols
    - Aligning security architecture, plans, controls, processes, policies, and procedures with security standards and operational goals
    - Sustaining critical security processes and compliance programs
    - Validation of the scope of the protection activities, maintaining records of decision and ensuring timely and effective communications
    - Addressing the BIA (Business Impact Analysis) & ITCP (IT Contingency Plan) in the event of an adversary to an organisation
- Ensuring that PCI compliance is a "business as usual" activity in the organization through consistent compliance activity planning, tracking, and reporting Ensure that narratives related to Card Data Processing remain up-to-date and relevant Ensure that broader information security management activities in the organisation effectively contribute to PCI compliance, minimising duplication of activity and maximising return on effort.
- Representing our company on several Information Technology Councils e.g., IITPSA, being responsible for overseeing the provision of expert advice, awareness and training on information security systems and effectively managing organisational reengineering including director's resources.
- Provide strategic direction on all IT Security department finances in line with sound Financial Management principles. Oversee the management and optimisation of Branch's budget and expenditure in line with financial requirements. Oversee the development of financial strategies to determine the right approach to the market to deal with issues that might arise from contracts issued or tenders. Ensure compliance to policies, standards, and guidelines in line with recognised financial provisions.
- Acquiring ICT products to be used in the company as well for clients following the ISO/IEC 19770, Procurement Regulations and the Frameworks for Supply Chain Management applying the SAP Material management (SAP MM) principles.
- Applying ISO 20000 towards Service Management System requirements, Design, and transition of new or changed services, Service delivery processes, Relationship processes, Resolution processes and Control processes.
- Oversee the provision of ICT service desk and end-user support, driving and administering the provision of ICT networking operations, connectivity, and risk management, providing leadership in the provision of ICT security operations, Information Systems governance, and disaster recovery, liaising with internal and external stakeholders to meet client's needs, ensuring effective and efficient management of resources in the ICT Director's office.
- Involved in the Human Resource process for IT personnel acquiring and writing weekly and monthly reports to the ICT Director on how the Unit performed on all the milestones and KPIs applying approved Human Resources frameworks.
- Oversee and manage ICT security and compliance research and advisory services in support of the core business requirements and the development, management and implementation of reliable, efficient, and cost-effective IT systems, architecture, infrastructure, and IT operational support services to meet the customers' requirements and to support the IT system of customers' entities and institutions.

Technologies and Frameworks Used:

1. *IT Forensic Tool Kits (SANS SIFT, CrowdStrike CrowdResponse, The Sleuth Kit and FTK Imager),*

2. *Business Intelligence and Analytic Tool kits (iRise Business Analysis Tool, JIRA Core, Heptalysis, and Balsamiq,*
3. *MISS (Minimum Information Systems Standards) and MIOS (Minimum Inter-Operability Standards),*
4. *ITIL (Information Technology Infrastructure Library), COBIT (Control Objectives for Information and related Technologies)*
5. *ISO Audit Tool Kits (QMSAT – Quality Management System Audit Toolkit, ISMISAT – Information Security Management System Audit Toolkit)*
6. *Cybersecurity Tools (SolarWinds Security Events Manager, Intruder, Malwarebytes, and CIS)*
7. *ISO 20000, ISO 19770, Supply Chain Management, Procurement, Finance Management and PMBOK Frameworks*
8. *Microsoft Office Suit (Project (Visio), Excel, Word, PowerPoint, Publisher, and Outlook)*

Reason for Leaving: Looking for better career prospects, professional growth, and work opportunities.

2. BANKSERVAFRICA (Randburg)

Period: January 2016 to March 2021 (5 years 3 months)
Position: Senior Manager IT and Networks Security
Reporting To: IT Security and Digital Communications Senior Manager
Responsibilities and duties:

- Responsible for networking troubleshooting, ICT security, application development and server administration, working with ICT systems, tools, networks and applied on different platforms such as CISCO, Arista, Dell, and Juniper etc.
- Undertaking the provision of ICT service desk and end-user support, administering the provision of ICT networking operations, connectivity, and risk management, providing support in the provision of ICT security operations and disaster recovery (IT Forensics), liaising with internal and external stakeholders to meet client's needs ensuring effective and efficient management of resources.
- Ensuring the effective management of the server room, data centres, desktops, software, input and output devices, LAN, WAN, information system security and cyber security, facilitating adoption and implementation of cloud-based technology.
- Research the latest information technology security trends and providing strategic leadership on the Configuration Management process of hardware and software assets and the effective management all ICT assets
- Monitor their organization's networks for security breaches and investigate violations when they occur.
- Help to design, implement, and maintain the organization's cyber-security plan.
- Develop and direct implementation of security standards and best practices for the organization.
- Direct the installation and use of security tools (e.g., firewalls, data encryption), to protect sensitive information.
- Recommend security enhancements to IT Management.
- Help computer technicians, end users when they need to install or learn about new security products and/or procedures.
- Ensure that IT security audits are conducted periodically or as needed (e.g., when a security breach occurs).
- Assist the Director with the development, implementation, and management of ICT strategy alignment with the department 's business objectives and information technology strategies.
- Motivate a team of tech support personnel (hardware/software specialists) via performance assessment and coaching, career planning, and educational goals.
- Supervise tech supports quality calibration and validation.
- Ensure periodic review, analysis of tech support's performance; identify opportunities for improvement (with respect to tools, methods, etc.)
- Facilitate resolution in the case of escalated support requests and engage appropriate support personnel.
- Provide IT and records management services managing the alignment the clients' information security to legislation, government standards and security frameworks, participating in ensuring the compliance of all systems to government IT policies such as MISS and MIOS; hence,

providing IT governance functions in accordance with international governance frameworks ITIL and COBIT through PMBOK and SDLC principles.

- Writing weekly and monthly reports to the Senior Manager on how the team performed on all given tasks and projects within the organisation as well as with clients.
- Writing system documentation reports monthly updating on the status of all the systems and the BIA (Business Impact Analysis) and the SPoF (Single Point of Failures) each system in the entire Information Systems
- Responsible for overseeing the provision of expert advice, awareness, and training on information security systems, manage organisational reengineering and manage the resources effectively.
- Ensure appropriate follow-up with external and internal customers, as well as making decisions quickly and decisively, often with limited information where critical information security is demanded rapidly.
- Assisting in the development and management of the effective implementation of ICT policies, processes and procedures as well as following up on all IT Service Level Agreement and Business Agreements between our organization and suppliers ensuring compliance to all agreements.

Technologies and Frameworks Used:

1. *Cybersecurity Tools (Mimecast, Intruder, Malwarebytes, and Snot)*
2. *IT Forensic Tool Kits (The Sleuth Kit and FTK Imager), IAR Embedded Workbench with I-Jet*
3. *Business Intelligence and Analytic Tool kits (Trello, Heptalysis and Gatherspace)*
4. *MISS (Minimum Information Systems Standards) and MIOS (Minimum Inter-Operability Standards),*
5. *ITIL (Information Technology Infrastructure Library), COBIT (Control Objectives for Information and related Technologies)*
6. *ISO 20000, ISO 19770, Supply Chain Management, Procurement, Finance Management and PMBOK Frameworks*
7. *Microsoft Office Suit (Project (Visio), Excel, Word, PowerPoint, Publisher, and Outlook)*

Reasons for Leaving: Discovered an opportunity to grow as a Unit Senior Manager (Cybersecurity, IT Forensics, and IS Auditing)

3. BUSINESS CONNEXIONS/BCX (Midrand)

Period: August 2011 to December 2015 (4 years 4 months)
Position: Network Security and Administrator (IT Security)
Reporting To: Manager
Responsibilities and duties:

- Designing, planning, installing, and configuring and setting up computer networks and systems (LAN/WAN), desktop support and server administration Firewall, Network & Server infrastructure, Desktop Operating Systems, Server operating Systems, Security Management and Backup Management.
- Maintaining, expanding, identifying, and solving any issues that arise with computer networks and systems through troubleshooting network problems.
- Consulting with clients to specify system requirements and design solutions.
- Budgeting for equipment, assembly costs, and assembling new systems.
- Maintaining existing software and hardware and upgrading any that have become obsolete and adding new host machine to the network.
- Monitoring computer networks and systems to identify how performance can be improved and administering network services such as NFS services, name services, and electronic mail.
- Working with IT support personnel and providing network administration and support
- Perform vulnerability and penetration test across all network segments.
- Identifying threats and work to create steps to defend against them.
- Monitoring network traffic for suspicious behaviour
- Configure security systems such as firewalls, antivirus, and Intrusion Detection Systems (IDS)/Intrusion Prevention Systems (IPS) software, security systems in Microsoft Novel and open sources systems.

- Create network policies and authorization roles for file access and administering network security. Consult with staff, managers, and executives on the best security practices.
- Analyse current security requirements and make suggestions for improvements and strategically planning and manage the operational ICT infrastructure.
- Configuring machines in users' homes or in remote office sites and enabling these machines to connect over telephone lines to the main systems.
- Define disaster recovery plans in both NAS and SAN environment and the maintenance as well as configuration of the NAS and SAN systems. Creating systems supported by both NAS and SAN combined systems.

Period: January 2011 to July 2011 (6 months)
Position: IT Intern (Internship)
Reporting To: Supervisor
Responsibilities and duties:

- Web Development: ASP.Net (C#), MSSQL and MySQL, PHP, Tomcat Apache, HTML, JavaScript / Typescript, CSS/SCSS, CSS Animation Adobe Program Suite,
- Maintaining, expanding, identifying, and solving any issues that arise with computer networks and systems through troubleshooting network problems.
- Monitoring computer networks and systems to identify how performance can be improved and administering network services such as NFS services, name services, and electronic mail.
- Consult with staff, managers, and executives on the best security practices.
- Configuring machines in users' homes or in remote office sites and enabling these machines to connect over telephone lines to the main systems.
- Experience in migration tools (P2P, P2V, V2V, and V2P), Advanced technical knowledge of VMWare virtualization technologies (vCenter, vSphere, ESXi, DRS, vMotion, HA, vSAN), VMWare, VMWare View, data backup management and shared storage (SAN, Vsan) administration

Technologies and Frameworks Used:

1. *NST (Network Security Toolkit) Linux system, Multi-tap Network Packet Capture Systems*
2. *MISS (Minimum Information Systems Standards) and MIOS (Minimum Inter-Operability Standards), PMBOK Framework*
3. *Microsoft Office Suit (Project (Visio), Excel, Word, PowerPoint, Publisher, and Outlook)*
4. *Microsoft Visual Studio (C#, ASP.Net, Web Development), NetBeans (Java SE, EE & ME)*
5. *Sublime, Notepad++, Atom, and UltraEdit*

Reason for Leaving: Company merged with Telkom, and I found an opportunity to manage (IT Network Security – cybersecurity, and forensics)

4. DAMELIN (Randburg)

Period: January 2010 to December 2010 (1 year)
Position: Senior Lecturer
Reporting To: Programme Coordinator
Responsibilities and duties:

- Conducting lectures on the following levels: B.Sc. 1st years: Network Engineering (Computer Networks), Visual Basic (Programming) and Web-Tech (HTML); B.Sc. 2nd years: Computer Architecture, Operating Systems, Database Design & Management, C++ (programming), Internet Programming (PHP) and Help Desk Technology; B.Sc. 3rd years: Software Engineering, Artificial Intelligence, Human Computer Interactions, Business Analysis and Java (programming) & C#.
- Preparation of Lecturer Monthly reports (on all the modules conducted), Preparation of Lesson Plans and Lecture Slides (presentation form) for the courses undertaken, setting of class exercises, marking and moderation of tests and examinations.
- Ensuring that appropriate staff are ordained and equipped for all courses taught within the department, participation in the interviews and selection of all staff within the department and ensuring that the right candidate has been selected.

- Assessment and motivation of staff and instigate appropriate orientation procedure for new staff, Inconsistence, affray, variance, interference and conflict management within the department and control of tests and examinations.
- Facilitating on the following levels and respective modules:
  - *B. Com: IM:* (Software Development (Visual Basic): 1st years; Principles of Database: 1st years; Web-Design (PHP, Basic HTML): 2nd years; Operating Systems: 2nd years; Information Systems 3A: 3rd years). (Advanced Software Development (Visual Basic): 1st years; Information Systems 2 (ASP.Net): 2nd years; Information Systems 3B: 3rd years; Database Implementations: 2nd years; E- Commerce: 3rd years).
  - *Diploma in IT:* (Information Systems 1A: 1st years; Programming 1A (Visual Basic): 1st years; Web-Development 2A (Basic HTML): 2nd years; Document Analysis & Design: 2nd years); (Information Systems 1B: 1st years; Programming 1B Visual Basic): 1st years; Web Development 2B (Java Script & PHP): 2nd years).
- Other modules/subjects that could be undertaken (Java, C++, C#, Artificial Intelligence, Computer Security, Software Engineering, Computer Networks (CCNA1 & CCNA2 certified) Statistics and Computer Architecture).
- Monitoring and tracking of answer scripts from marking until verification of exam scripts until data capturing and Research on individual given modules.
- Ensuring that appropriate staff are ordained and equipped for all courses taught within the department, participation in the interviews and selection of all staff within the department and ensuring that the right candidate has been selected.
- Assessment and motivation of staff and instigate appropriate orientation procedure for new staff, Inconsistence, affray, variance, interference and conflict management within the department and control of tests and examinations.
- Liaison with academics and relevant stakeholders in commerce and industry (Standard Bank, FNB, Discovery & Vodacom) to ensure ongoing development and relevant academic programmes, Cooperating and engaging in designing, monitoring, evaluation and development of academic programs and their curriculum.
- IT Facilitator/Mentor: involved in setting examinations, tests, designing study guides (training curriculum) and assignments, Interviewing IT staff, job simulations.
- Other Modules: Information Systems, Risk Management and Strategic Management, System Development (level 5 HCIT); Development and upgrading (maintenance) of Study Guides (Computer Networks, Programming (Visual Basic, C++ & Java), Web-Development (HTML & PHP), Database Management, Operating Systems, Computer Architecture, Software Engineering and Artificial Intelligence).
- Preparation of Lecture Plans and Lecture Slides for the courses undertaken; Setting and moderation of In-Class Tests and Final Examinations for all the modules undertaken.
- Preparing memos and marking of In-Class Tests and Examinations of all modules undertaken, monitoring, and tracking of answer scripts from marking until verification of the exam scripts after data capturing; Participating in students registration process (i.e., approval of credits and exemptions).
- Keeping records of the attendances and the marks (tests, assignment, and exams) for future reference

Technologies and Frameworks Used:

1. *Microsoft Visual Studio (C#, ASP.Net, Web Development), NetBeans (Java SE, EE & ME)*
2. *Sublime, Notepad++, Atom, and UltraEdit, Packet Tracer, CBT Nuggets, ReadyTech, and CloudShare.*
3. *Microsoft Office Suit (Project (Visio), Excel, Word, PowerPoint, Publisher, and Outlook)*

Reason for Leaving: Found an opportunity/internship to grow from into the IT Network Security industry.

5. UNIVERSITY OF FORT HARE (Alice/East London Campuses)

Period: January 2009 to December 2009 (1 year)
Position: Lab Administrator and Tutor
Reporting To: Head of Department (HOD)
Responsibilities and Duties:

- Ensuring all Computer Laboratories in the Department of Computer Science have updated and required software which suits all learners in the department.
- Install new / rebuild existing servers and configure hardware, peripherals, services, settings, directories, storage, etc. in accordance with standards and project/operational requirements. Manages the day-to-day server operations.
- Apply OS patches and upgrades on a regular basis and upgrade administrative tools and utilities. Configure / add new services as necessary. Works with vendors to assist support activities.
- Perform daily system monitoring, verifying the integrity and availability of all hardware, server resources, systems, and key processes, reviewing system and application logs, and verifying completion of scheduled jobs such as backups. Perform troubleshooting as required.
- Problem-solving efforts often involve outside vendors and other support personnel and/or organizations. Repair and recover from hardware or software failures. Coordinate and communicate with impacted constituencies.
- Establishes, maintains, and manages users accounts and access permissions.
- Installs, modifies, and maintains systems and utility software on server computer systems. Provides server support related to other software. Develop and maintain procedures to ensure that system hardware, operating systems, software systems, and related procedures adhere to best practices. Develop and maintain procedures to maintain security and protect systems from unauthorized use.
- Lecturing the following levels: B.Sc. & B.Com. 1st years: Computer Literacy (CLT) and Introduction to Programming with Visual Basic; B.Sc. 2nd years: Computer Networks (CCNA 1 & CCNA 2).
- Tutoring the following levels: (B.Sc. 1st years: Visual Basic; B.Sc. 2nd years: Database Management and C++; B.Sc. 3rd years: Software Engineering, Artificial Intelligence and Java; B.Sc. Honours: Java and Network Security).
- Arranging and assigning tutors to given different modules, Creating the budget and pay rolls to the given number of tutors, Monitoring and checking if all tutorials are being conducted accordingly.

Technologies and Frameworks Used:

1. *NetBeans, Visual Studio*
2. *Notepad, Microsoft Office Suit (Project (Visio), Excel, Word, PowerPoint, Publisher, and Outlook)*

Reason for Leaving: Completed my B.Sc. Honours Degree studies and looking for employment.

PERSONAL INFORMATION AND INTERESTS:

Achievements:

- Recipient of the Presidential Scholarship to study at Fort Hare University (2006 - 2008)
- Graduated B.Sc. degree with Cum-Laude
- Recipient of Telkom Bursary to study B.Sc. Honours degree at Fort Hare University (2009)
- Conducting several leading positions career wise (IT Projects) and in the society (2012 - 2020)

Interests:

- Computer & IT Security, Information Security (Cyber Security, IS Auditing & IT Forensic Auditing)
- Systems Design and Development (Programming: Java Spring Boot, ReactJ, Vite, Html)
- Business Analysis and Business Intelligence (Data Mining)
- Information Communication Technologies for Development (ICT4D) initiatives
